## DEFINITIONS

The terms used in the licence are defined as follows:

- «licence»: the present licence.
- «original work»: the work or computer programme distributed or communicated by the licensor in accordance with the present licence in the form of source code or, where applicable, executable code.
- «derivative works»: the works or computer programmes which the licensee is permitted to create based on the original work or a modification of this. The present licence does not define the degree of modification or dependence on the original work which is necessary to classify a work as a derivative; this will be determined in accordance with the legislation relating to author rights, based on article 15.
- «work»: the original work or its derivative works.
- «source code»: the format of the work readable by human beings which can be most easily studied and modified.
- «executable code»: any code compiled generally which is intended to be interpreted by a computer as a programme.

- «licensor»: the individual or legal entity who distributes or communicates the work in accordance with the licence.
- «partner»: the individual or legal entity who modifies the work in accordance with the licence or contributes in any other manner to create a derivative work.
- «licensee»: the individual or legal entity who makes any use of the work based on the established licence conditions.
- «distribution» or «communication»: any act of sale, donation, loan, leasing, distribution, communication, transfer or any other means of providing, on line or off line, copies of the work or access to its essential functionalities to another individual or legal entity.

## **SCOPE OF RIGHTS GRANTED BY LICENCE**

The licensor grants the licensee a licence with global scope, which is free of charge, non-exclusive and which permits the licensee to subcontract as long as the author's rights over the original work remain valid, and which authorises them to:

- utilise the work,
- reproduce the work,
- modify the work and create derivative works of the same as long as such derivative works are exclusively for private use and not for distribution or commercialisation.
- communicate the work to the public or provide copies of the same, provide or exhibit the work or copies and, where applicable, execute the work publicly,
- distribute the work or copies of the same in its entirety as part of another work carried out by the licensee.

Such rights may be exercised via any means, device or format, which exist currently or may be developed in the future, to the extent permitted by the applicable legislation. In countries whose regulations cover moral rights, the licensor will relinquish the exercising of these to the extent permitted by the legislation, for the purposes of making effective the licensing of property rights listed above. The licensor grants the licensee, free from royalties, non-exclusive rights to use over any patent to which it has title, to the extent necessary so that the licensee is able to make use of the rights over the work granted by the present licence.

## **COMMUNICATION OF SOURCE CODE**

The licensor will provide the work in the form of a source code or an executable code under a repository in which the source code can be easily accessed free of charge during the period in which the licensor continues to distribute or communicate the work.

## **LIMITATIONS TO AUTHOR RIGHTS**

Under no circumstances may the present licence be interpreted in a way which deprives the licensee of the benefits they may enjoy as a consequence of the exceptions or limitations to the exclusive rights of the holders of the rights of the work, the elimination of such rights or any other applicable restriction.

## **OBLIGATIONS OF LICENSEE**

The granting of rights pursuant to the present licence is conditional on certain restrictions or obligations which must be respected by the licensee. These obligations are:

- The right to attribution: The licensee must fully retain all notices and references to author rights, patents or registered trademarks, as well as those which refer to the licence and exemption of liability. The licensee should attach copies of such notices and references and the licence itself to each copy of the work it distributes or communicates. The licensee is responsible for ensuring that all derivative works include a clearly highlighted declaration that the work has been modified and also provide the date of notification.

- Protection of other rights: The present licence does not enable the use of commercial names, product or service brands or licensor names, except when there is a necessity to indicate the origin of the work and to reproduce the contents of the notice and author rights, as long as this is carried out in a reasonable manner and in accordance with habitual use.

## **SEQUENCE OF AUTHORSHIP**

The original licence guarantees the original holder author rights over the work which is the subject of the present licence or the acquisition of these by means of the corresponding licence and has the authority to grant licences over such rights. Each partner is guaranteed to be holder of the author rights regarding the modifications it makes to the work or those it obtains by means of the corresponding licence and is authorised to grant licences over such rights. Each time the licensee accepts the licence, the original licensor and subsequent partners grant a licence over their own contributions to the works based on the conditions established in the present licence.

## **EXCLUSION OF GUARANTEE**

The work is undergoing constant development and evolution and is subject to continuous improvement. It may contain defects or faults inherent to this type of development. Accordingly, the work, pursuant to the licence, is supplied «as is», without any type of guarantee, including, but not limited to, in terms of its commercialisation, adjustment to a specific objective, absence of defects or faults, exactitude and absence of infringement of intellectual property rights distinct from author rights as outlined in article 6 of this licence. This exclusion of guarantee forms an essential part of the licence and it is a condition for granting any right with regard to the work.

## **EXCLUSION OF LIABILITY**

Except in cases of fraud or deceit, or damage caused directly to individuals, the licensor shall not be liable for damage or loss of any type, whether direct or indirect, material or moral, which may arise from the licence or use of the work, including, but not limited to, damage due to loss of good reputation, technical delay, damage or malfunctioning of IT equipment, loss of data or other commercial damage, including if the licensor is aware of the possibility of such damage. However, the licensor will be liable, in accordance with the legal provisions which regulate the liability, for damage caused by products, on the basis that such regulations are applicable to the work.

## **ADDITIONAL AGREEMENTS**

On distributing the work, the licensee is permitted to subscribe to additional agreements containing obligations or services which are compatible with the present licence. However, on accepting such obligations, the licensee shall act solely in their own name and under their exclusive responsibility and never in the name of the original licensor nor of any other partner, and all that on the condition that they agree to indemnify, defend and support all partners against any liability the latter may incur and against claims which may be made against them due to the licensee having accepted the guarantee or additional liability referred to.

## **ACCEPTANCE OF LICENCE**

The present licence is considered accepted at the point when it is downloaded and used or on declaration of consent in any other similar format, in accordance with the provisions of the applicable legislation. An unequivocal and irrevocable acceptance of the present licence and its whole content is expressed. Similarly, the licensee irrevocably accepts the present licence and all its conditions by virtue of the simple exercising of any of the rights granted by article 2 of the present licence, such as use of the work, the creation of a derivative work of the distribution or communication of the work or of copies of the same.

## **INFORMATION TO THE PUBLIC**

In cases when the licensee distributes or communicates the work via electronic means (for example offering remote download of the work), the public must be provided with information about the channel or means of distribution (for example a website) as a minimum to the extent required by the applicable legislation relating to the licence, the licensor and the manner in which the licensee is permitted to access such data, accept it, maintain it and reproduce it.

## **VALIDITY**

Notwithstanding the provisions of article 9, the licence shall represent the entirety of the agreement between the parties in respect of the work. The possible invalidity or nullity of any provision contained within the present licence based on the legislation in force will not affect the general validity or effectiveness of the licence. In such cases, the provision will be interpreted or reformulated based on what is required to make it valid and effective.

## **CONFLICT RESOLUTION**

Any conflict arising, directly or indirectly, from the interpretation, application, fulfilment and execution of the present contract, including any dispute relating to the contract's existence, validity or termination, and in general any related dispute will be definitively resolved by means of arbitration of rights [the parties may alternatively agree to arbitration of equity], managed by the Valencia Court of Arbitration (Court of Arbitration of the College of Lawyers of Valencia, Community of Valencia, with headquarters in Valencia, Plaza de Tetuan, No 16) in accordance with the regulations, the applicable version being that which is in force at the point when the process commences. Arbitration will be decided by a sole arbitrator and the location where this will take place is the city of Valencia (Spain), proceedings taking place at the headquarters of the Valencia Court of Arbitration, this body being committed to comply with the terms of the findings and any other ruling dictated pursuant to the proceedings.

Notwithstanding the provisions of a specific agreement between the parties, the present licence will be regulated by Spanish legislation.
